GLACIAL LAKES

The lakes of Mount Desert were created by the great ice-sheet that once flowed across this region...

Riding over the very tops of the granite mountains, this invader from the north may have been 5000 feet in thickness.

So it is no wonder that such colossal power could scoop out great "bathtubs" in the valley bottoms.

Eagle Lake was so created.

ACADIA NATIONAL PARK

Mount Desert Island is a rock fortress surrounded by its outpost islets, at the edge of a hostile sea.

Allied with other natural forces of land destruction the ocean forever seeks to level these heights down to a plain.

This endless struggle has here, in Acadia National Park, resulted in all the beauty that surrounds you.

For Nature it is simply the course of things. To Mankind it means not merely physical recreation, but an uplifting of the human spirit and increased understanding of all life -- including your own.

INVASION BY THE SEA
This rocky coast has not always been as you see it today. Long ago the ocean made a great invasion of the land. Mountain tops became islands. The stream valleys became bays, coves and tidal creeks.
As a sea bird might fly, the coast of Maine is nearly 200 miles long. But if you followed its broken, tortuous shoreline, you would travel farther than from here straight to Florida.

THE GRANITE OF MOUNT DESERT
Most conspicuous, enduring and handsomest of the rocks of Mount Desert is the pink granite at your feet. If you examine a piece closely, you can identify its chief components, pink feldspar, glassy quartz, blackish hornblend.
This granite originated as a great, deep-seated mass of molten rock which rose to invade the overlying rock cover. Ages of weathering have stripped off this cover to expose the granite which today forms the mountains of Acadia National Park.

BAR HARBOR
The first summer visitors who came to Mount Desert got "room and board" with farmers and fishermen. The board included lobsters and home-made doughnuts. No wonder they came back! Quickly the word spread that here was a haven of refuge from summer heat, and a region of beauty and interest.
So Bar Harbor, because of its favorable location, grew to be a vacation resort known the world around.
